BBkits System Validation Bug Report - Round 1

Prepared for practical validation follow-up with Shohei

Status	Validation in progress - final acceptance not granted
Environment	Production
URL	https://bbkit.onrender.com
Prepared by	BBkits validation review
Round	Initial practical review based on live usage

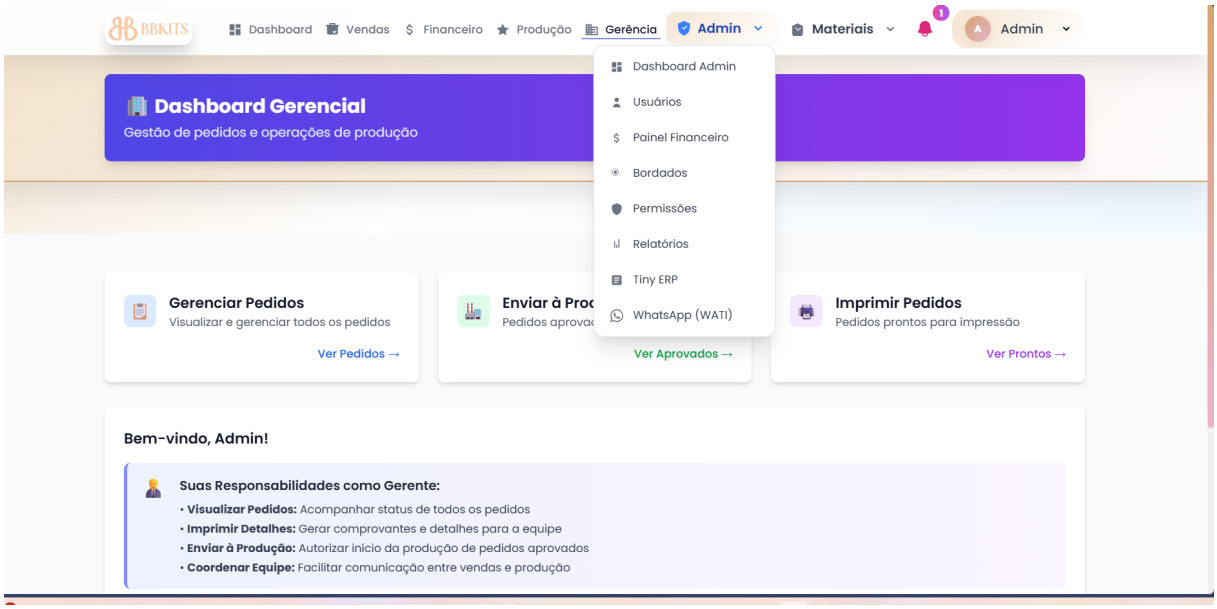
Initial practical review identified reproducible critical and high-severity issues in production. Based on the findings below, the current system should remain in correction and stabilization status.

Severity summary	**Critical: 3**	**High: 2**

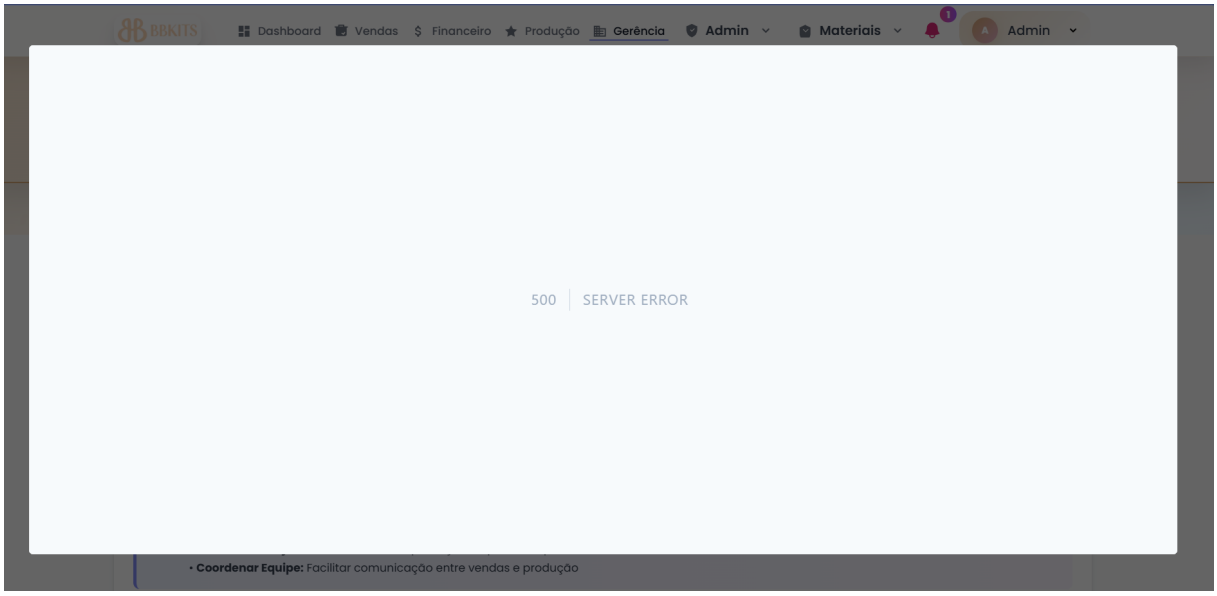
BUG 001	Admin Dashboard returns 500 Server Error
Severity	Critical
Module	Admin
Screen/Page	Dashboard Admin
Current Behavior	When clicking “Dashboard Admin”, the system opens a blank modal/page with “500 Server Error”.
Expected Behavior	The Admin Dashboard should open normally and display the expected admin controls and information.
Status	Open

Evidence

Screenshot 01 - Admin menu showing the Dashboard Admin entry that triggers the error.



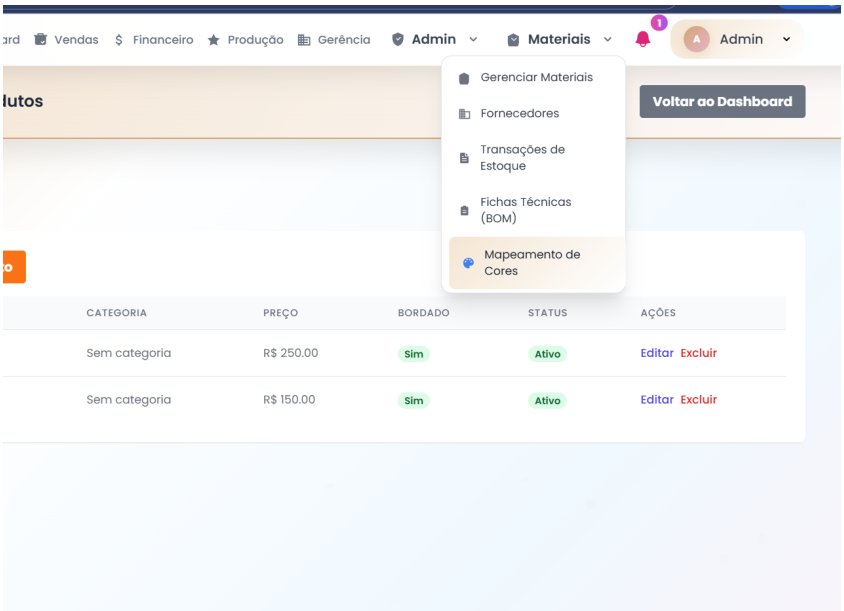
Screenshot 02 - 500 Server Error shown immediately after clicking Dashboard Admin.



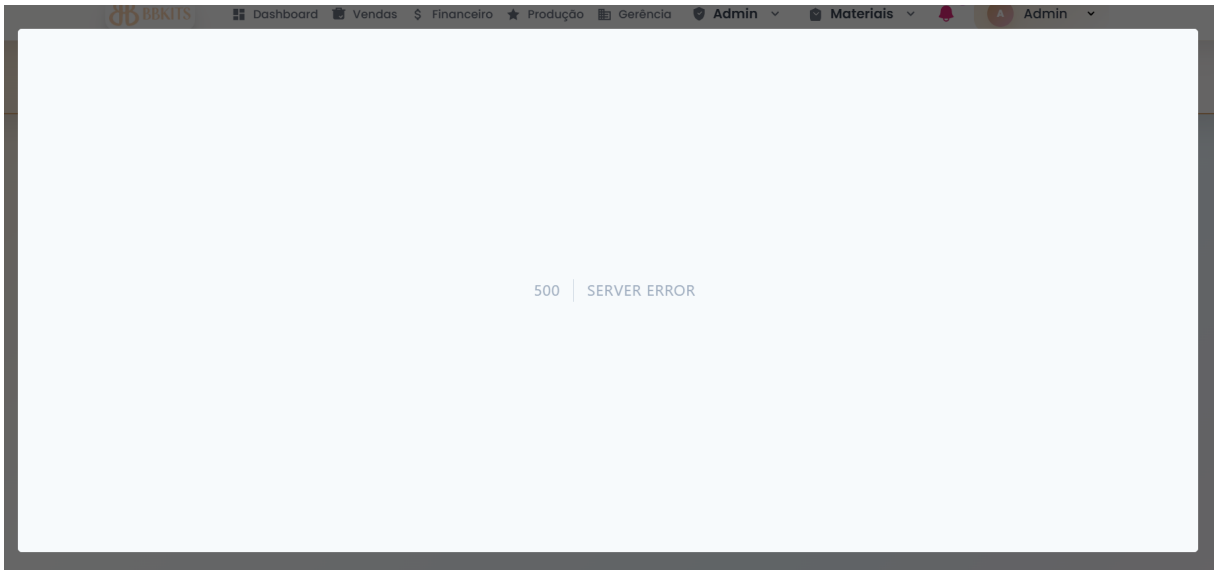
BUG 002	Color Mapping returns 500 Server Error
Severity	Critical
Module	Materials / Color Mapping
Screen/Page	Mapeamento de Cores
Current Behavior	When clicking “Mapeamento de Cores”, the system returns “500 Server Error”.
Expected Behavior	The Color Mapping page should load normally and allow configuration and management of color mappings.
Status	Open

Evidence

Screenshot 06 - Materials menu showing the Color Mapping entry.



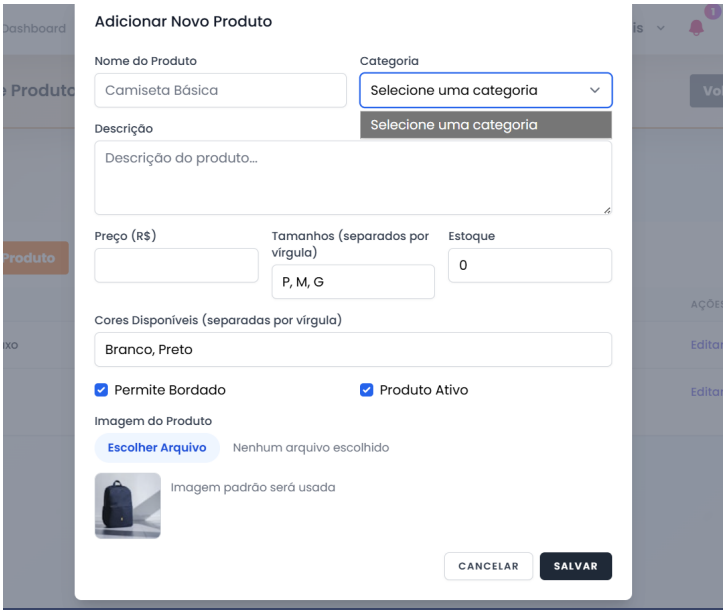
Screenshot 07 - 500 Server Error shown after opening Color Mapping.



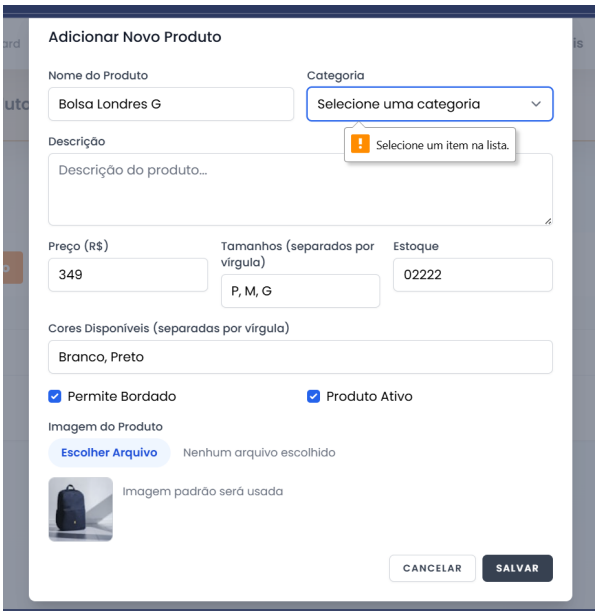
BUG 003	Product category flow is inconsistent
Severity	**High**
Module	Products
Screen/Page	Add New Product / Product List
Current Behavior	The product creation form requires selecting a category, but no usable categories are available to select and there is no clear visible path to create them from the flow. Existing products are still saved and displayed as “Sem categoria”.
Expected Behavior	Either categories must be available and manageable before product creation, or category should not be required if the system allows products without category. The rules and actual behavior must be consistent.
Status	Open

Evidence

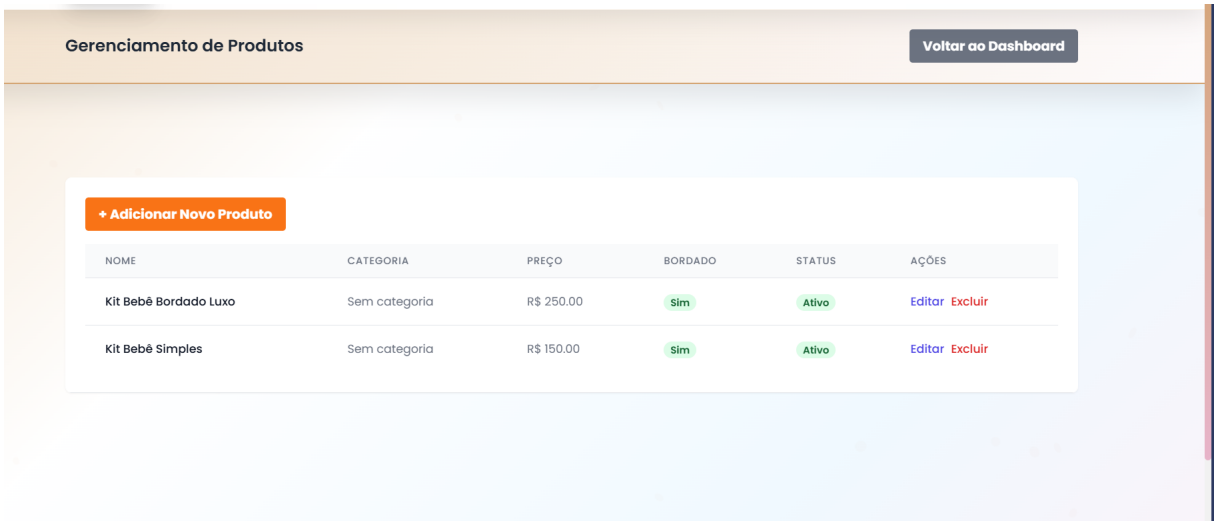
Screenshot 03 - New product form with category dropdown but no real category options.



Screenshot 04 - Validation message requesting category selection.



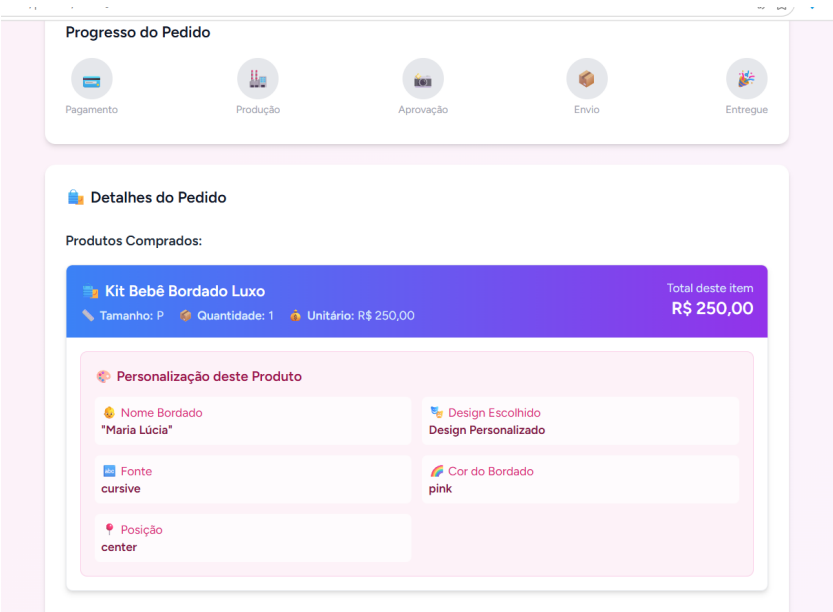
Screenshot 05 - Product list showing existing products saved as “Sem categoria”.



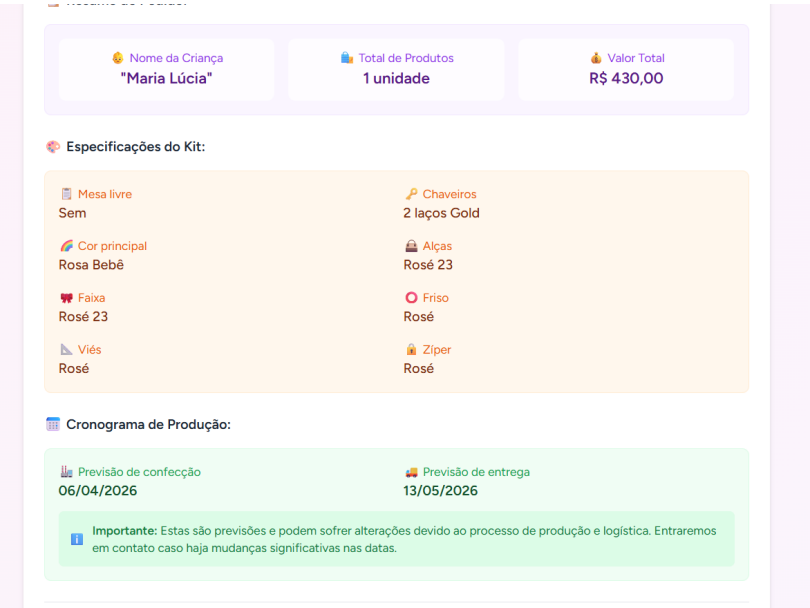
BUG 004	Order pricing and financial values are inconsistent
Severity	**Critical**
Module	Orders / Finance
Screen/Page	Order Details / Financial Summary
Current Behavior	Different sections show values that do not reconcile clearly. In the reviewed order, one section shows an item total of R$ 250,00, another section shows total order value of R$ 430,00, the financial summary shows subtotal of R$ 340,00 plus freight of R$ 90,00, and the remaining balance displayed is R$ 280,00. The presentation does not currently provide a reliable or traceable financial logic.
Expected Behavior	Item value, subtotal, freight, total order value, paid amount, and remaining balance should be internally consistent and clearly explained to the user.
Status	Open

Evidence

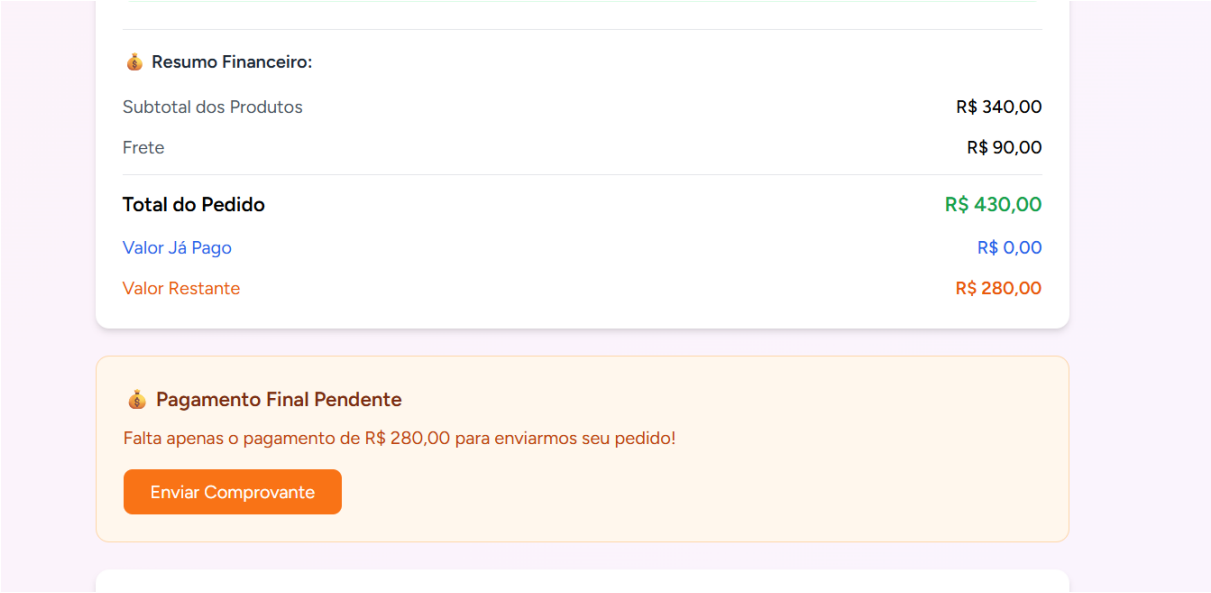
Screenshot 08 - Order detail area showing product item total of R$ 250,00.



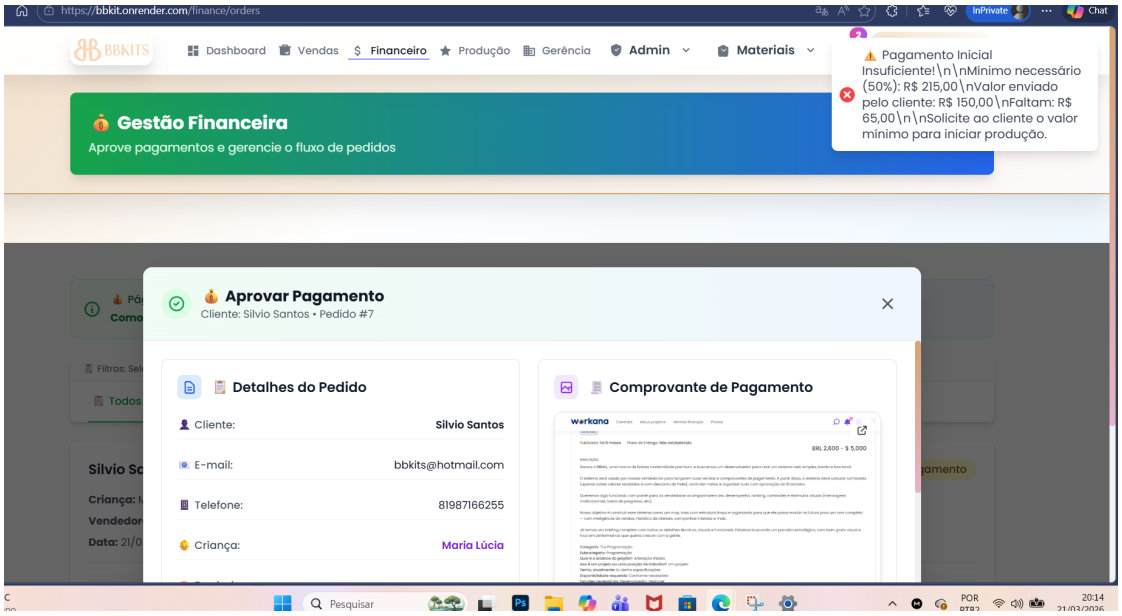
Screenshot 09 - Order detail area showing total order value of R$ 430,00.



Screenshot 10 - Financial summary showing subtotal R$ 340,00, freight R$ 90,00, and remaining balance R$ 280,00.



BUG 005	Minimum initial payment rule is not enforced correctly
Severity	**High**
Module	Finance / Payment Approval
Screen/Page	Payment Approval Flow
Current Behavior	The system indicates that the minimum initial payment must be 50%, but it still allows the flow to advance and only displays the warning afterward.
Expected Behavior	If the minimum required amount is not met, the system should block or reject the transition at the correct validation point before acceptance or approval.
Status	Open

Evidence


Screenshot 11 - Warning message showing the 50% minimum requirement only after the flow has already advanced.
